

# ClipRead™

by Live Ink

The screenshot shows the Live Ink ClipRead application window. The title bar reads "Live Ink ClipRead" and the menu bar includes "File", "Options", and "Help". The main content area displays text in a cascading format. Several callout boxes provide additional information:

- Personalize:** Background Color, Font Type and Size, Dictionary Select.
- Click here to page back.** (points to a circular button)
- Click on a word, access Dictionary.** (points to the word "Dictionary" in the text)
- Copy text. Click here to Convert new selection.** (points to a dashed rectangular selection box)
- Click here to page forward.** (points to a circular button)
- Status:** Waiting for Click, Parsing progress, Current settings. (points to the status bar)

The status bar at the bottom shows "Parsed", "Arial 24 Northshore", and "80 Page 1".

# Using ClipRead

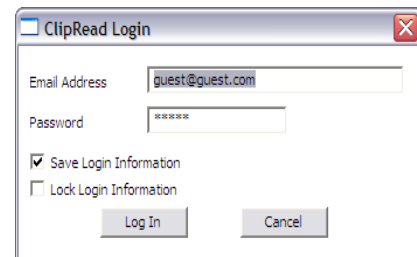

ClipRead allows you to convert electronic, or digital, text into Live Ink format. The following instructions will help you get started:

1) Launch the application by either:

- a. Double-clicking on the Desktop or Dock icon,  or
- b. Finding the application in the Applications/Program file.

2) ClipRead login:

- a. Enter provided e-mail and password
- b. Click in the 'Save Login Information' box
- c. Click 'Log In', and ClipRead will launch.

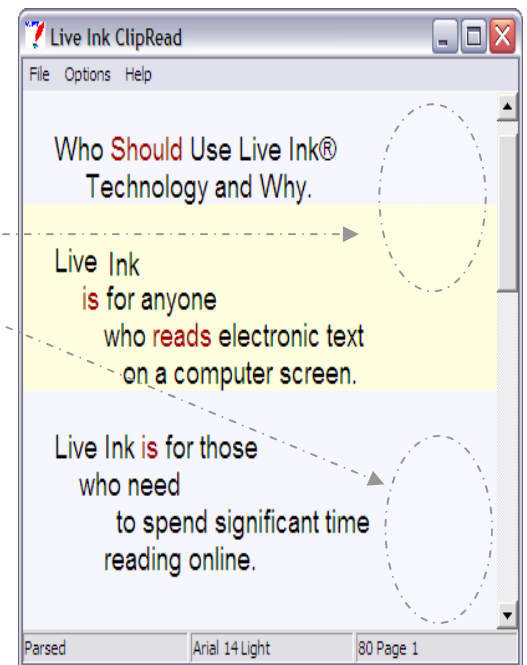

3) Choose what you would like to read.

Any digital text that you can highlight and copy is applicable (website, e-mail, PDF, word document...) – to do this:

- **Highlight** your chosen text, then
- **Copy** the text (select 'Edit' from your toolbar and click 'Copy' from the dropdown menu, use the mouse, or use keyboard shortcuts).
- **Click** inside the reading panel
  - Avoid clicking on a word within the reading panel
  - Clicking the frame or scroll bar will not work

The parsed text will appear almost instantly in the reading panel. You are ready to read.

# Using ClipRead

## Navigation

There are various methods for navigating through reading selections. ClipRead will open in 'page' mode, moving from one reading panel to the next, never breaking a sentence across panels (unless the sentence is extremely long.). You may also scroll the entire selected reading from top to bottom within a single reading panel.

### Page Mode:

- 1) Page **forward** in the reading by clicking in the lower right corner of the reading panel.
- 2) Page **back** in the reading by clicking in the upper right corner of the reading panel.

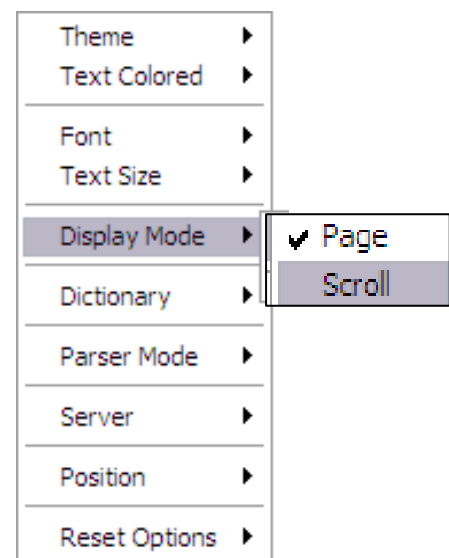

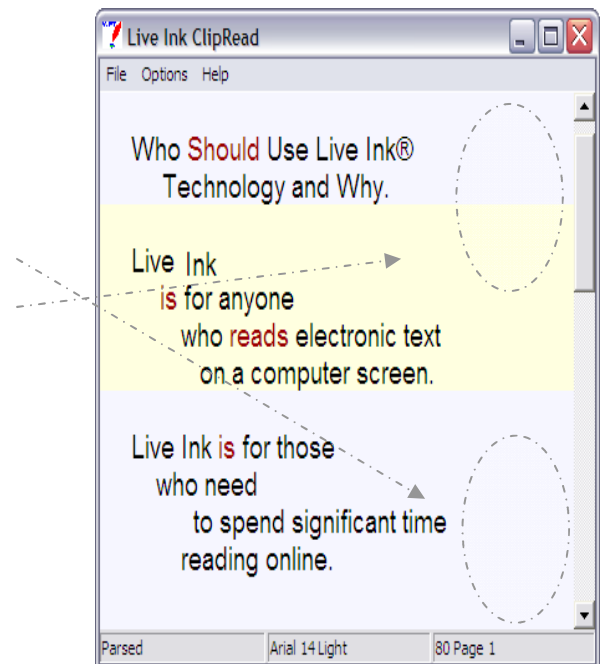

Alternatively, you may use '**Page Down**' and '**Page Up**' on your keyboard to move forward and back in the reading.

### Scroll Mode:

To scroll from the beginning of your selection to the end, instead of using the page function, select **Options >> Display Mode >> Scroll**

For best results use:

- o Up or Down scrollbar arrows
- o Your mouse wheel (if available), or
- o The slider bar within the scrollbar  
(this method may produce flashing text, so slide the bar slowly.)
